Semi-Annual (Third and Fourth Quarter) 2005 Discharge Monitoring Report
Waste Discharge Requirements Order Number R4-2002-0030 (Series 007)
Compliance File Number CI-95-036, SLIC 0410
Project Site: Former Boeing C-6 Facility (Building 2 Area), Los Angeles, California

Date:
January 26, 2006

Dear Information Technology Unit:

On behalf of Boeing Realty Corporation (BRC), ARCADIS is submitting this semi-annual groundwater monitoring report per the Waste Discharge Requirements (WDR) Order Number R4-2002-0030 (Series 007). The purpose of this report is to provide the Los Angeles Regional Water Quality Control Board (RWQCB) with a summary of bioremediation amendment injection and groundwater monitoring activities performed at the above-referenced project site. The site is located at 19503 Normandie Avenue, Los Angeles, California. Figures 1 and 2 illustrate the site location and the site layout, respectively.

bmolnaa@arcadis-us.com

Project Number:
CA000674.0001.00002

This monitoring report summarizes groundwater amendment and monitoring activities performed during the third and fourth quarter of 2005. Amendment activities performed during the reporting period are summarized in Section 1.0. Groundwater monitoring activities performed to evaluate the distribution of amendment solution are summarized in Section 2.0. A certification statement is provided in Section 3.0.

1.0 Amendment Activities

Amendment activities (carbohydrate injection or water injection testing activities) were not conducted during the third and fourth quarter of 2005.

2.0 Monitoring Activities

During the third and fourth quarter of 2005, quarterly groundwater monitoring was performed at the site. Per the WDR monitoring schedule, quarterly groundwater monitoring follows the initial nine months of post-injection groundwater monitoring

January 26, 2006

(sample Week 2, Week 6, Week 12, Week 16, Week 21, and Week 36 after the first injection).

Third quarter groundwater monitoring was conducted on September 21 and 22, 2005. Fourth quarter groundwater monitoring was performed on December 19 through 21, 2005. During the third and fourth quarter 2005 monitoring events, 11 monitoring wells (IRZMW001A/B, IRZMW002A/B, IRZMW003A/B, IRZMW004, IRZMW005, IRZCMW001, IRZCMW002, IRZCMW003, CMW0001, CMW0002, and CMW0026) were gauged and sampled. The monitoring well locations are identified on Figure 2. During the December 2005 sampling event, well IRZMW001A was gauged but not sampled because of an obstruction in the well. The groundwater samples from third and fourth quarter 2005 monitoring were analyzed for volatile organic compounds (VOCs). Field parameters of purged groundwater were also collected (ferrous iron, pH, dissolved oxygen [DO], oxidation reduction potential [ORP], specific conductance, and temperature). Samples collected from IRZCMW002 and CMW0002 on September 22, 2005 appear to be switched. Discussion with field personnel, laboratory personnel, and comparisons with field notes were inconclusive. However, the laboratory results appear to confirm the error when compared to historical data trends. Samples collected on December 21, 2005 verified the previous results and support the anomaly.

Field parameter data, laboratory analytical methods, and analytical results from the groundwater monitoring events are summarized in Tables 1 through 4. Samples collected from the above mentioned groundwater monitoring wells were not analyzed for total organic carbon (TOC), bromide, total iron, total manganese, dissolved manganese, nitrate, sulfate, and permanent gases (DO, carbon dioxide, nitrogen, methane, ethane, and ethene) during the third and fourth quarter 2005 per the WDR permit schedule. Inorganic and permanent gases analytical results from past sampling events are provided as Table 2 and Table 4, respectively. Laboratory analytical data with associated chain-of-custody documentation are provided in Appendix A. Sample collection logs with field parameters and monitoring well sampling data are maintained in the project files and are not provided with this report.

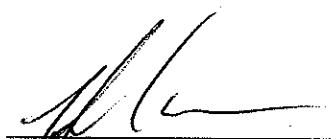

Prior to collecting the groundwater samples, depth to groundwater was measured in each monitoring well using a water level meter accurate to 0.01 feet. Figure 3 shows the groundwater elevation contours for Zones B and C in December 2005. Groundwater samples were collected using low flow sampling techniques, so that the purge rate was generally less than 600 milliliters per minute (mL/min) and drawdown while purging was less than 1 foot. The elevations measured in both zones appear to be relatively flat. Calculated contours indicate that there is a slight shift in groundwater flow direction, which may be attributed to seasonal rainfall and the location of monitoring wells.

January 26, 2006

The sampling methodology also involved use of a flow-through cell that contains field instrumentation used to measure groundwater stabilization parameters (i.e., temperature, pH, specific conductance, ORP, and DO). For each monitoring well, the flow-through cell was connected to a submersible pump with dedicated polyethylene tubing. Once the field parameters stabilized, groundwater samples were collected in laboratory-prepared containers. Field parameters and other relevant sampling data were documented on sample collection logs. The groundwater samples were transported in a chilled ice chest with proper chain-of-custody documentation to an analytical laboratory certified by the State of California (Severn Trent Laboratories, Inc.).

3.0 Certification Statement

I declare under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who managed the system or those directly responsible for gathering the information, the information submitted, is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Notes:

Wells micropurged then sampled, except grab bailer samples collected 10/12/04.

Group A: wells located within the estimated injection area

Group B: wells located at the estimated edge of the injection area

Group C: wells located downgradient of the treatment area

Group D: wells located upgradient of the treatment area

feet msl - feet above mean sea level

mg/L - milligrams per liter

mV - millivolts

°C - degrees Celsius

N/A - Not applicable

NM - Not measured

Notes:

Group A: wells located within the estimated injection area

Group B: wells located at the estimated edge of the injection area

Group C: wells located downgradient of the treatment area

Group D: wells located upgradient of the treatment area

J - The analyte results were positively identified, and numerical values are an approximate concentration of the analyte in the sample.

QC - A quality control parameter associated with the analyte is not within laboratory or method required quality control limits.

<1.0 - Not detected above indicated reporting limit

NS - Not Sampled

ARCADIS

Notes:

Group A: wells located within the estimated injection area

Group B: wells located at the estimated edge of the injection area

Group C: wells located downgradient of the treatment area

Group D: wells located upgradient of the treatment area

µg/L - micrograms per liter

< - not detected above indicated reporting limit

PCE - tetrachloroethene

TCE - trichloroethene

DCE - dichloroethene

TCA - trichloroethane

DCA - dichloroethane

J - estimated result less than reporting limit

JB - acetone detected at 11 µg/L in trip blank

(a) 2-Hexanone was also detected at a concentration of 2,000 µg/L.

(b) Methyl tert-butyl ether was also detected at an estimated concentration of 3.9 µg/L.

Barry Molnaa
ARCADIS Geraghty & Miller, Inc
1400 N. Harbor Blvd.
Suite 700
Fullerton, CA 92835-4127

Dear Mr. Molnaa,

This report contains the analytical results for the 16 samples received under chain of custody by STL Los Angeles on December 22, 2005. These samples are associated with your Boeing former C6 facility Torrance, California project.

This report has been amended to reflect id change for the Trip Blank.

All applicable quality control procedures met method-specified acceptance criteria except as noted on the following page. Historical control limits for the LCS are used to define the estimate of uncertainty for a method. See Project Receipt Checklist for container temperature and conditions. Temperature reading between 2 to 6 degrees Celsius is considered within acceptable criteria. Any matrix related anomaly is footnoted within the report.

STL Los Angeles certifies that the tests performed at our facility meet all NELAP requirements for parameters for which accreditation is required or available. The case narrative is an integral part of the report. This report shall not be reproduced except in full, without the written approval of the laboratory.

If you have any questions, please feel free to call me at (714) 258-8610 extension 325.

Sincerely,

Diane Suzuki
Project Manager

LOT NUMBER E5L220372

Nonconformance 05-15065

Affected Samples:

E5L220372 (7): IRZB0081_WG122005_01
E5L220372 (16): TRIP BLANK

Affected Methods:

8260B

Case Narrative:

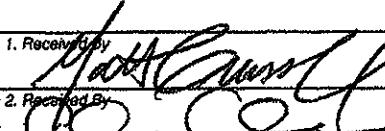

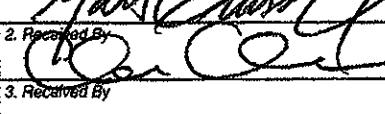

One VOA vial from each sample above contain bubbles > 6mm in diameter. Analysis is performed on a VOA vial without headspace when available.

NOTE(S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Eric Lothman
ARCADIS Geraghty & Miller, Inc
1400 N. Harbor Blvd.
Suite 700
Fullerton, CA 92835-4127

Dear Mr. Lothman,

This report contains the analytical results for the 17 samples received under chain of custody by STL Los Angeles on September 23, 2005. These samples are associated with your Boeing former C1 facility Long Beach, California project.

All applicable quality control procedures met method-specified acceptance criteria except as noted on the following page. Historical control limits for the LCS are used to define the estimate of uncertainty for a method. See Project Receipt Checklist for container temperature and conditions. Temperature reading between 2 to 6 degrees Celsius is considered within acceptable criteria. Any matrix related anomaly is footnoted within the report.

STL Los Angeles certifies that the tests performed at our facility meet all NELAP requirements for parameters for which accreditation is required or available. The case narrative is an integral part of the report. This report shall not be reproduced except in full, without the written approval of the laboratory.

If you have any questions, please feel free to call me at (714) 258-8610 extension 325.

Sincerely,

Diane Suzuki
Project Manager

LOT NUMBER E5I230414

Nonconformance 05-14077

Affected Samples:

E5I230414 (1): TB_AR092105_01
E5I230414 (2): IRZMW001A_WG092105_01
E5I230414 (3): IRZMW001B_WG092105_01
E5I230414 (4): IRZMW002B_WG092105_01
E5I230414 (6): IRZMW003B_WG092105_01
E5I230414 (8): IRZMW004_WG092105_01

Affected Methods:

8260B

Case Narrative:

One VOA vials from the following contain bubbles > 6mm in diameter.

E5I230414 (1): TB_AR092105_01
E5I230414 (3): IRZMW001B_WG092105_01
E5I230414 (4): IRZMW002B_WG092105_01
E5I230414 (8): IRZMW004_WG092105_01

Three VOA vials from samples above contain bubbles > 6mm in diameter.

E5I230414 (2): IRZMW001A_WG092105_01
E5I230414 (6): IRZMW003B_WG092105_01

Analysis is performed on a VOA vial without headspace when available.

NOTE (S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Conditions of Carriage

Air transportation on Delta, the Delta Connection carriers, and Song® is subject to Delta's conditions of carriage. To include terms governing, for example:

- Limits on our liability for personal injury or death of passengers, and for loss, damage or delay of goods and

baggage.

- Claim restrictions, including time periods within which you must file a claim or bring an action against us
- Our right to change terms of the contract
- Check-in requirements and other rules establishing when we may refuse carriage
- Our rights and limits of our liability for delay or failure to perform service, including schedule changes, subst alternative air carriers or aircraft, and rerouting
- Our policy on overbooking flights, and your rights if we deny you boarding due to an oversold flight

These terms are incorporated by reference into our contract with you. You may view these conditions of carriage o delta.com, or by requesting a copy from Delta.
